I. INTRODUCTION

A. RISK FACTORS

1. Standard Risk Factors

a. Mutual funds and securities investments are subject to market risks and there is no assurance or guarantee that the Fund's objective will be achieved.

b. As the price / value / interest rates of the securities in which the scheme invests fluctuates, the value of investment in the scheme may go up or down.

c. Past performance of the Sponsor / AMC / Mutual Fund or its affiliates does not gurantee the future performance of the scheme(s) of the Mutual Fund.

d. State Bank of India, the sponsor, is not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution made by it of an amount of Rs. 5 lakhs towards setting up of the mutual fund.

e. SBI Long Duration Fund is only the name of the scheme and does not, in any manner, indicate either the quality of the scheme or its future prospects and returns.

f. The NAV of the Scheme's Units may be affected by change in the general market conditions, factors and forces affecting capital markets in particular, level of interest rates, various market related factors and trading volumes.

g. The present scheme is not a guaranteed or assured return scheme.

h. Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.

2. Scheme Specific Risk Factors

A. The Mutual Fund is not assuring any Income Distribution cum capital withdrawal (IDCW) nor is it assuring that it will make any IDCW distributions. All IDCW distributions are subject to the availability of distributable surplus and would depend on the performance of the scheme.

1. SBI Long Duration Fund will be investing in a manner such that such that the Macaulay duration of the portfolio is greater than 7 Years. Trading volumes and settlement periods inherently restrict the liquidity of the scheme's investments. In the event of a restructuring of the scheme's investment portfolio, these periods may become significant.

2. **Risks associated with Investing in Structured Obligation (SO) & Credit Enhancement (CE) rated securities:**

The risk of investing in structured obligation is similar to risks associated with fixed income instruments. However, they carry following additional risks:

- **Liquidity Risk:** Typically the liquidity of structured obligations could be lower as compared to debt securities as the market for structured products is not very deep. Hence, they may carry higher liquidity risk.
- **Default Risk:** In case of default from this portfolio, there could be limited recourse available for recovery subject to the specific transaction terms and dependent on the legal terms. Hence they could carry higher default risk.

Credit enhancements are specified by Credit Rating Agencies. However, the credit enhancement stipulated in a securitization transaction represents a limited loss cover only. Following are the additional risks associated with credit enhancements:

Counterparty risk associated with credit enhancement: Credit enhancement can be provided by guarantee or cash collateral. For instance in case of guarantee, the investors are exposed to the credit quality risk of corporate entity providing the guarantee. Similarly, if the cash collateral is the fixed deposit of a financial institution (A), the investor is exposed to the credit risk associated with that financial institution

3. Debt & money market securities investments under the scheme may also be subject to the following risks:

1) **Credit risk:** Credit risk is risk resulting from uncertainty in counterparty's ability or willingness to meet its contractual obligations. This risk pertains to the risk of default of payment of principal and interest. Government Securities have zero credit risk while other debt instruments are rated according to the issuers' ability to meet the obligations.

2) **Liquidity Risk** pertains to how saleable a security is in the market. If a particular security does not have a market at the time of sale, then the scheme may have to bear an impact depending on its exposure to that particular security.

3) **Interest Rate risk** is associated with movements in interest rate, which depend on various factors such as government borrowing, inflation, economic performance etc. The value of investments will appreciate/ depreciate if the interest rates fall/rise. However, if the investments are held on till maturity of the investments, the value of the investments will not be subjected to this risk.

4) **Reinvestment risk:** This risk arises from uncertainty in the rate at which cash flows from an investment may be reinvested. This is because the bond will pay coupons, which will have to be reinvested. The rate at which the coupons will be reinvested will depend upon prevailing market rates at the time the coupons are received.

4. Risks associated with Investing in ADR/GDR/Foreign Securities:

- Subject to necessary approvals and within the investment objectives of the Scheme, the Scheme may invest in Foreign Securities including foreign equities. Such investments carry risks related to fluctuations in the foreign exchange rates, the nature of the securities market of the country, repatriation of capital due to exchange controls and political circumstances.
- It is the AMC's belief that investment in Foreign Securities offers new investment and portfolio diversification opportunities into multi-market and multi-currency products. However, such investments also entail additional risks. Such investment opportunities may be pursued by the AMC provided they are considered appropriate in terms of the overall investment objectives of the Scheme. Since the Scheme would invest only partially in Foreign Securities, there may not be readily available and widely accepted benchmarks to measure performance of the Scheme.
- Overseas investments will be made subject to any/all approvals, conditions thereof as may be stipulated under the SEBI Regulations or by RBI and provided such investments do not result in expenses to the Scheme(s) in excess of the ceiling on expenses prescribed by and consistent with costs and expenses attendant to international investing. The Mutual Fund may, where necessary, appoint other intermediaries of repute as advisors, custodian/subcustodians, etc. for managing and administering such investments. The appointment of such intermediaries shall be in accordance with the applicable requirements of SEBI and within the permissible ceilings of expenses.
- To the extent that the assets of the Scheme will be invested in Foreign Securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by changes in the value of certain foreign currencies relative to the Indian Rupee. The repatriation of capital to India may also be hampered by changes in regulations concerning exchange controls or political circumstances as well as the application to it of other restrictions on investment.

5. **Risks associated with Investing in Derivatives:**

1. The AMC, on behalf of the Scheme may use various derivative products, from time to time, in an attempt to protect the value of the portfolio and enhance Unit holders' interest. Investors should understand that derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with underlying instruments. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Other risks include but are not limited to the risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. There may be a cost attached to selling or buying futures or other derivative instrument. Further there could be an element of settlement risk, which could be different from the risk in settling physical shares. The possible lack of a liquid secondary market for a futures contract or listed option may result in inability to close futures or listed option positions prior to their maturity date.

2. Derivatives are high risk, high return instruments as they may be highly leveraged. A small price movement in the underlying security could have a large impact on their value and may also result in a loss.

3. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

4. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

5. The fund may use derivative instruments like Interest Rate Swaps, Forward Rate Agreements or other fixed income derivatives.

6. **Credit Risk:** The credit risk in a derivative transaction is the risk that the counter party will default on its obligations and is generally low, as there is no exchange of principal amounts in a derivative transaction.

7. **Market risk:** Derivatives carry the risk of adverse changes in the market price.

8. **Illiquidity risk:** The risk that a derivative cannot be sold or purchased quickly enough at a fair price, due to lack of liquidity in the market.

9. **Floating Leg Risk:** The fund pays the daily compounded rate. In practice, however there can be a difference in the actual rate at which money is lent in the call market and the benchmark, which appears and is used.

It may be mentioned here that the guidelines issued by Reserve Bank of India from time to time for forward rate agreements and interest rate swaps and other derivative products would be adhered to.

6. Securitized debt investments under the scheme may also be subject to the following risks:

a) **Liquidity risk:** There is no assurance that a deep secondary market will develop for the instrument. This could limit the ability of the investor to resell them.

b) **Limited Recourse:** The instruments represent an undivided beneficial interest in the underlying receivables and do not represent an obligation of either the Issuer or the Seller or the originator, or the parent or any affiliate of the Seller, Issuer and Originator. No financial recourse is available to the buyer of the security against the Investors' Representative.

c) **Delinquency and Credit Risk:** Delinquencies and credit losses may cause depletion of the amount available under the Credit Enhancement and thereby the Monthly Investor Payouts to the Holders may get affected if the amount available in the Credit Enhancement facility is not enough to cover the shortfall. On persistent default of an Obligor to repay his obligation, the Servicer may repossess and sell the Vehicle/ Asset. However, many factors may affect, delay or prevent the repossession of such Vehicle/Asset or the length of time required to realize the sale proceeds on such sales. In addition, the price at which such Vehicle/Asset may be sold may be lower than the amount due from that Obligor.

d) **Risks due to possible prepayments:** Full prepayment of a contract may lead to an event in which investors may be exposed to changes in tenor and yield.

Bankruptcy of the Originator or Seller: If the service provider becomes subject to bankruptcy proceedings and the court in the bankruptcy proceedings concludes that either the sale from each Originator was not a sale then an Investor could experience losses or delays in the payments due under the instrument.

7. Risk factors associated with repo transactions in corporate debt securities:

Corporate Bond Repo transactions are currently done on OTC basis and settled on non-guaranteed basis. Credit risks would arise if the counter party fails to repurchase the security as contracted. This risk is largely mitigated, as the choice of counterparties is largely restricted and also haircuts are applicable on the underlying bonds depending on credit ratings. Also operational risks are lower as such trades are settled on a DVP basis.

In the event of the scheme being unable to pay back the money to the counterparty as contracted in case of transactions as a borrower, the counter party may dispose of the assets (as they have sufficient margin) and the net proceeds may be refunded to the Mutual Fund. Thus, the scheme may in remote cases suffer losses. This risk is normally mitigated by better cash flow planning to take care of such repayments.

8. Risks associated with segregated portfolio

Different types of securities in which the scheme would invest carry different levels and types of risk as given in the Scheme Information Document of the scheme. In addition to the same, unitholders are requested to also note the following risks with respect to Segregated Portfolio:

1. Investor holding units of segregated portfolio may not able to liquidate their holding till the time there is recovery of money from the issuer.
2. Listing of units of segregated portfolio in recognized stock exchange does not necessarily guarantee their liquidity, as there may not be active trading of units in the stock market. Further trading price of units on the stock market may be at a significant discount compared to the prevailing NAV.

Securities which are part of the segregated portfolio may or may not recover any money, either fully or partially.

9. Risks associated with imperfect hedging using IRFs Risk factors associated with imperfect hedge using interest rate futures

a) The cost of hedge can be higher than adverse impact of market movements
b) Price / change in price of a security may or may not be the same in spot/cash and futures segment of the market. This may lead to the hedging position not giving the exact desired hedge result.
c) Derivatives will entail a counter-party risk to the extent of amount that can become due from the party.
d) Efficiency of a derivatives market depends on the development of a liquid and efficient market for underlying securities.

Illustration for Imperfect Hedge on Interest Rate Futures

Security	Market Value (in Cr.)	Weight in the Portfolio	Yield (%)	Modified Duration	Weighted Modified Duration
GOI 7.35% 22.06.2024	50.00	10.64%	7.05	5.00	0.53
GOI 6.79% 15.05.2027	400.00	85.11%	7.03	6.85	5.83
GOI 6.68% 17/09/2031	20.00	4.26%	7.08	8.71	0.37
	470.00				
679GS2027 IRF	100.99				

Consider a hypothetical portfolio or a part of a larger portfolio composed of 3 different securities with a Portfolio Average Modified Duration of 6.74. On account of change in economic factors, it is expected that the interest rates could go up by 1% over the coming days. The portfolio would look to hedge the impact on this portfolio through selling IRF, of which the underlying security is different as given. This would be an example of imperfect hedge where the portfolio that is hedged and the instrument underlying the futures contract are different. The maximum number of contracts in IRF to sold is given by the following formula = (Market Value portfolio * Modified Duration of portfolio)/ (Market Value of 1 Futures contract* Modified Duration of futures)

The impact on portfolio due to a 1% rise in yields is approx Rs. 31.65 crs. Since the portfolio has sold IRF contracts, the gain on account of the same is around Rs. 31.65 crs. Accordingly, the loss on the underlying portfolio is hedged through IRF even as the underlying securities are different. The scheme would pursue imperfect hedging to the extent permitted by extant SEBI guidelines

10. Risk factors associated with instruments having special features

- The scheme shall invest in certain debt instruments with special features which may be subordinated to equity and thereby such instruments may absorb losses before equity capital. The instrument is also convertible to equity upon trigger of a pre-specified event for loss absorption as may be decided by the RBI.
- The debt instruments with special features are considered as Non-Convertible Debentures, may be treated as debt instruments until converted to equity.
- The instruments are subject to features that grants issuer a discretion in terms of writing down the principal/coupon, to skip coupon payments, to make an early recall etc. Thus debt instruments with special features are subject to "Coupon discretion", "Loss Absorbency", "Write down on Point of Non-viability trigger (PONV) event" and other events as more particularly described as per the term sheet of the underlying instruments.

The instrument is also subject to Liquidity Risk pertaining to how saleable a security is in the market. The particular security may not have a market at the time of sale due to uncertain/insufficient liquidity in the secondary market, then the scheme may have to bear an impact depending on its exposure to that particular security.

11. Stock lending may be subject to the following risk

Securities Lending is a lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed. If the Scheme undertakes stock lending under the regulations, it may be exposed to the risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary.

12. Risks associated with Backstop facility in form of investment in Corporate Debt Market Development Fund (CDMDF):

CDMDF is set up as a Trust registered as an Alternative Investment Fund ('AIF') in accordance with the SEBI (Alternative Investment Funds) Regulations, 2012 ("AIF Regulations"). The objective of the CDMDF is to help develop the corporate debt market by providing backstop facility to instill confidence amongst the market participants in the corporate debt/bond market during times of market dislocation and to enhance the secondary market liquidity. In times of market dislocation, CDMDF shall purchase and hold eligible corporate debt securities from the participating investors (i.e., specified debt-oriented MF schemes to begin with) and sell as markets recover. The CDMDF will thus act as a key enabler for facilitating liquidity in the corporate debt market and to respond quickly in times of market dislocation. The trigger and period for which the backstop facility will be open shall be as decided by SEBI Board. Thus this backstop facility will help fund managers of the aforementioned Schemes to better generate liquidity during market dislocation to help the schemes fulfill liquidity obligations under stress situation.

In accordance with the requirement of regulation 43A of SEBI (Mutual Funds) Regulations, 1996 read with SEBI circular no. SEBI/HO/IMD/PoD2/P/CIR/2023/129 dated July 27, 2023 on Investment by Mutual Fund Schemes in units of Corporate Debt Market Development Fund, the aforementioned schemes shall invest 25 bps of its AUM as on December 31, 2022 in the units of the Corporate Debt Market Development Fund ('CDMDF'). An incremental contribution to CDMDF shall be made every six months to ensure 25 bps of scheme AUM is invested in units of CDMDF. However, if AUM decreases there shall be no return or redemption from CDMDF. Contribution made to CDMDF, including the appreciations on the same, if any, shall be locked-in till winding up of the CDMDF.

Investments in CDMDF units shall not be considered as violation while considering maturity restriction as applicable for various purposes (including applicable Investment limits) and the calculations of Potential Risk Class (PRC) Matrix, Risk-o-meter, Stress testing and Duration for various purposes shall be done after excluding investments in units of CDMDF.

B. Risk Control strategies:

Investments in debt securities and money market instruments including debt derivatives carry various risks such as inability to sell securities, trading volumes and settlement periods, interest rate risk, liquidity risk, default risk, reinvestment risk etc. Whilst such risks cannot be eliminated, they may be mitigated by diversification and hedging.

In order to mitigate the various risks, the portfolio of the Scheme will be constructed in accordance with the investment restriction specified under the Regulations which would help in mitigating certain risks relating to investments in securities market.

Further, the AMC has necessary framework in place for risk mitigation at an enterprise level. The Risk Management division is an independent division within the organization. Internal limits are defined and judiciously monitored. Risk indicators on various parameters are computed and are monitored on a regular basis. There is a Board level Committee, the Risk Management Committee of the Board, which enables a dedicated focus on risk factors and the relevant risk mitigants.

For risk control, the following may be noted:

Liquidity risks:

The liquidity of the Scheme's investments may be inherently restricted by trading volumes, transfer procedures and settlement periods. Liquidity Risk can be partly mitigated by diversification, staggering of maturities as well as internal risk controls that lean towards purchase of liquid securities.

Interest Rate Risk:
Changes in interest rates affect the prices of bonds. If interest rates rise the prices of bonds fall and vice versa. A well-diversified portfolio may help to mitigate this risk.

Volatility risks:

There is the risk of volatility in markets due to external factors like liquidity flows, changes in the business environment, economic policy etc. The scheme will manage volatility risk through diversification. To that extent the Volatility risk will be mitigated in the scheme.

Credit Risks

Credit risk shall be mitigated by investing in rated papers of the companies having the sound back ground, strong fundamentals, and quality of management and financial strength of the Company.

Liquidity Risk Management Framework:

The scheme adopts the Liquidity Risk Management Framework (LRM) as mandated by SEBI and AMFI, which requires Scheme Portfolio to maintain certain portion of their investments in liquid assets. This portion as required to be kept, is ascertained basis the scheme's liability profile, i.e investor profile. This framework seeks to estimate a likely quantum of redemption that the scheme is expected to face over the next 30 days and requires the scheme to maintain liquid assets to that extent as a minimum requirement. The Framework also enumerates corrective actions to be taken in the event of any shortfall owing to higher redemption than estimated. The Investment Manager also have in place an Asset Liability Mismatch (ALM) Framework which monitors similar aspects for a longer tenure of 90 days and ensures that schemes assets are always adequate to cater to liabilities.

Stress Testing:

The Investment Manager conducts Stress Tests on the Asset side, i.e. Portfolio assets on key aspects like Interest Rate Risk, Credit Risk and Liquidity Risk. These are done at an aggregate portfolio level to evaluate the impact of NAV from each of these risks. These NAV impact figures are then compared to Thresholds as laid out by AMFI and by AMC for monitoring and any action, if deemed necessary. The stress test is performed using the methodology and periodicity as mandated by AMFI in consultation to SEBI, as amended from time to time.

C. CREDIT EVALUATION POLICY & DUE DILIGENCE FOR CREDIT RISK

- **CREDIT EVALUATION POLICY**

Credit Analysis is a bottom up approach starting with looking at each individual issuer, industry, terms and covenants of a particular issue, etc. Individual issuer level exposures are taken only after approval from investment committee, i.e. issuer becoming part of "Accepted Credit Universe". A team of credit analyst will do a detailed analysis and prepare an initiation note to introduce an issuer to the universe.

For every issuer we focus on 4 Cs of credit

- Capacity
- Character
- Collateral
- Covenants

Key focus areas are

- Management Quality
- Financial Analysis
- Business Analysis
- Industry Analysis
- Regulatory Environment
- Feedback from Creditors
- Other Issues; auditor report and qualifications, etc

Regular management interaction at various levels, supported by plant visits, interaction with rating agencies is part of the process.

Once a credit limit is set, it is regularly monitored based on internal Tier classification.

- **DUE DILIGENCE FOR CREDIT RISK**

While carrying out due diligence for credit risk, following parameters/attributes are analysed:

- **Management Quality** – It includes assessment of management quality, reviewing promoter background and track record, performance of group companies and possibility of group support, internal control systems, succession plans & repayment track record including that of other companies in the group.
- **Financial Analysis** – It includes analysis of Balance sheet, Profit and Loss account, and cash flow statement. Ratio analysis for the past years including quarterly/half yearly results analysis wherever available. Different set of ratios are analysed for corporates, banks, NBFCs etc.
- **Business Analysis** – It includes understanding of competitive position and competitor analysis on key parameters, strategies for growth, technical and marketing skill set, manufacturing process, productivity details and future expansion plans.
- **Industry Analysis** – It includes assessment of current and estimated demand and supply scenario, Industry structure (fragmentation), End-user analysis of demand, Industry cycles & seasonal factors affecting the business, Entry barriers, threat of import and prospects of exports, Competition from global players, Outlook for key inputs and sensitivity.
- **Regulatory Environment** - It is tracked separately for different industries in terms of Government policies, Impact of changes in taxation policies, other regulatory provisions and impact of them.

D. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme. However, if such limit is breached during the NFO of the Scheme, the Fund will endeavor to ensure that within a period of three months or the end of the succeeding calendar quarter from the close of the NFO of the Scheme, whichever is earlier, the Scheme complies with these two conditions. In case the Scheme does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme shall be wound up and the units would be redeemed at applicable NAV.

The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days' notice to redeem his exposure over the 25% limit. Failure on the part of the said investor to redeem his exposure over the 25% limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

(ix) **Segregation of Portfolio:**

Creation of segregated portfolio shall be subject to following guidelines specified by SEBI as per Paragraph 4.4 of Master Circular for Mutual Funds dated May 19, 2023:

The term 'segregated portfolio' shall mean a portfolio, comprising of debt or money market instrument affected by a credit event that has been segregated in a Mutual Fund Scheme and the term 'main portfolio' shall mean the Scheme portfolio excluding the segregated portfolio and the term 'total portfolio' shall mean the Scheme portfolio including the securities affected by the credit event.

Segregated portfolio will be created, in case of a credit event at issuer level i.e. downgrade in credit rating by a SEBI registered Credit Rating Agency (CRA), as under:

• Downgrade of a debt or money market instrument to 'below investment grade, or
• Subsequent downgrades of the said instruments from 'below investment grade, or
• Similar such downgrades of a loan rating.

In case of difference in rating by multiple CRAs, the most conservative rating will be considered. Creation of segregated portfolio will be based on issuer level credit events as mentioned above and implemented at the ISIN level.

Creation of segregated portfolio of unrated debt or money market instruments of an issuer that does not have any outstanding rated debt or money market instruments:

Segregated portfolio of such unrated debt or money market instruments may be created only in case of actual default of either the interest or principal amount. For unrated instruments, 'actual default' by the issuer of such instruments shall be considered for creation of segregated portfolio. AMC shall inform AMFI immediately about the actual default by the issuer. Upon being informed about the default, AMFI shall immediately inform the same to all AMCs. Pursuant to dissemination of information by AMFI about actual default by the issuers, AMCs may segregate the portfolio of debt and money market instruments of the said issuers.

Creation of segregated portfolio for investment in debt instruments with special features

Segregated portfolio of such instruments may be created in case the said instrument is to be written off or converted to equity pursuant to any proposal, the date of said proposal may be treated as the trigger date. However, if the said instruments are written off or converted to equity without proposal, the date of write off or conversion of debt instrument to equity may be treated as the trigger date subject to compliance with para 4.4 of Master Circular on Mutual Funds dated May 19, 2023respect to 'Creation of segregation portfolio in mutual fund schemes' and any other relevant Regulations/Circulars/Guidelines issued in the future from time to time

PROCESS:

The recommendation of creating the segregated portfolio needs to be approved by the Board of AMC & Trustee.

Further, the AMC shall immediately issue a press release disclosing its intention to segregate such debt and money market instrument and its impact on the investors. The AMC will also disclose that the segregation shall be subject to trustee approval.

Additionally, the said press release will be prominently disclosed on the website of the AMC.

The AMC will ensure that till the time the trustee approval is received, which in no case shall exceed 1 business day from the day of credit event, the subscription and redemption in the scheme shall be suspended for processing with respect to creation of units and payment on redemptions.

Post approval process:

Once AMC & trustee approval is received by SBIFML:

1. Segregated portfolio shall be effective from the day of credit event
2. SBIFML shall issue a press release immediately with all relevant information pertaining to the segregated portfolio. The said information shall also be submitted to SEBI.
3. An e-mail or SMS should be sent to all unit holders of the concerned scheme.
4. The NAV of both segregated and main portfolio shall be disclosed from the day of the credit event.
5. All existing investors in the scheme as on the day of the credit event shall be allotted equal number of units in the segregated portfolio as held in the main portfolio.
6. No redemption and subscription shall be allowed in the segregated portfolio. However, in order to facilitate exit to unit holders in segregated portfolio, AMC shall enable listing of units of segregated portfolio on the recognized stock exchange within 10 working days of creation of segregated portfolio and also enable transfer of such units on receipt of transfer requests.

7. If the AMC Board/ trustees do not approve the proposal to segregate portfolio, AMC shall issue a press release immediately informing investors of the same.

Security Valuation and processing of subscriptions and redemptions:

1. The valuation of any security sought to be segregated will be valued based on the principles of fair valuation (i.e. realizable value of the assets) in terms of the relevant provisions of SEBI (Mutual Funds) Regulations, 1996 and Circular(s) issued thereunder and shall be in line with the valuation policy, which would be either external valuation prices or hair cut based valuation as applicable. The valuation price may deviate from the above based on adequate reasons and necessary disclosure as required by the SEBI guidelines.

2. All subscription and redemption requests for which NAV of the day of credit event or subsequent day is applicable will be processed as per the existing circular on applicability of NAV. However, in case of segregated portfolio, applicability of NAV will be as under:
   - Investors redeeming their units will get redemption proceeds based on the NAV of main portfolio and will continue to hold the units of segregated portfolio.
   - Investors subscribing to the Scheme will be allotted units only in the main portfolio based on its NAV

Disclosure requirements:

A statement of holding indicating the units held by the investors in the segregated portfolio along with the NAV of both segregated portfolio and main portfolio as on the day of the credit event will be communicated to the investors within 5 working days of creation of the segregated portfolio. Further, adequate disclosure of the segregated portfolio will also appear in all scheme related documents, in monthly and half-yearly portfolio disclosures and in the annual report of the mutual fund and the Scheme. Further, the NAV of the segregated portfolio will be declared on daily basis.

The information regarding number of segregated portfolios created in a scheme shall appear prominently under the name of the scheme at all relevant places such as SID, KIM-cum-Application Form, advertisement, AMC and AMFI websites, etc. The scheme performance required to be disclosed at various places will include the impact of creation of segregated portfolio. The scheme performance will clearly reflect the fall in NAV to the extent of the portfolio segregated due to the credit event and the said fall in NAV along with recovery(ies), if any, will be disclosed as a footnote to the scheme performance. These disclosures regarding the segregated portfolio will be carried out for a period of at least 3 years after the investments in segregated portfolio are fully recovered/ written-off.

The investors of the segregated portfolio will be duly informed of the recovery proceedings of the investments of the segregated portfolio and status update will be provided to the investors at the time of recovery and also at the time of writing-off of the segregated securities.

Total Expense Ratio (TER) for the segregated portfolio

SBIFML shall not charge investment and advisory fees on the segregated portfolio. However, TER (excluding the investment and advisory fees) can be charged, on a pro-rata basis only upon recovery of the investments in segregated portfolio.

The TER so levied shall not exceed the simple average of such expenses (excluding the investment and advisory fees) charged on daily basis on the main portfolio (in % terms) during the period for which the segregated portfolio was in existence.

The legal charges related to recovery of the investments of the segregated portfolio may be charged to the segregated portfolio in proportion to the amount of recovery. However, the same shall be within the maximum TER limit as applicable to the main portfolio. The legal charges in excess of the TER limits, if any, shall be borne by SBIFMPL.

The costs related to segregated portfolio shall in no case be charged to the main portfolio.

Monitoring by Trustees

In order to ensure timely recovery of investments of the segregated portfolio, Trustees will ensure that, the SBIFML puts in sincere efforts to recover the investments of the segregated portfolio. Upon recovery of money, whether partial or full, it will be immediately distributed to the investors in proportion to their holding in the segregated portfolio. Any recovery of amount of the security in the segregated portfolio even after the write off shall be distributed to the investors of the segregated portfolio. Further, an Action Taken Report (ATR) on the efforts made by the SBIFML to recover the investments of the segregated portfolio will be placed in every Trustee meeting till the investments are fully recovered/ written-off.

The Trustees will monitor the compliance of this circular and disclose in the half-yearly trustee reports filed with SEBI, the compliance in respect of every segregated portfolio created.

In order to avoid mis-use of segregated portfolio, trustees will ensure that there is a mechanism in place to negatively impact the performance incentives of Fund Managers, Chief Investment Officers (CIOs), etc. involved in the investment process of securities under the segregated portfolio, mirroring the existing mechanism for performance incentives of the AMC, including claw back of such amount to the segregated portfolio of the scheme.

Creation of segregated portfolio will be optional and at the discretion of the AMC.

Illustration of impact of Portfolio Segregation on scheme and its investors:
Before Segregation:

Total Portfolio	**Regular Plan**	**Direct Plan**
Net Asset (a)	500	200
Units (b)	20.00	10.00
NAV per Unit (c = a/b)	25.00	20.00

Assumptions:

The above portfolio has a security XYZ with current market value on the date of segregation of Rs 70 which has been downgraded below investment grade or has defaulted. Post splitting the Total portfolio into Main portfolio and Segregated portfolio, the impact will be as below:

After Segregation:

Main Portfolio	**Regular Plan**	**Direct Plan**
Net assets before segregation (a)	500	200
Market Value of Security XYZ (b)	50.00	20.00
Net assets after segregation (c = a – b)	450.00	180.00
Units (d)	20.00	10.00
NAV per unit (c/d)	22.500	18.000

Segregated Portfolio	**Regular Plan**	**Direct Plan**
Net Assets* (a)	50.00	20.00
Units (b)	20.00	10.00
NAV per Unit (c = a/b)	2.50	2.00

(*equivalent of market value of segregated security)

For existing investors, the total portfolio will decline by the amount which is segregated (i.e. value of main portfolio after segregation). They will be allotted equal number of units in the main portfolio and the segregated portfolio in the same proportion as held by them in the total portfolio. Thereafter, existing investors can redeem from the main portfolio based on the prevailing NAV and they will continue to hold units in the segregated portfolio. For any new investor, they will be allotted units only in the main portfolio based on the prevailing NAV. NAV of the segregated portfolio may undergo a change on the future depending on any recovery and any applicable haircut.

(x) Mandatory Swing pricing for market dislocation

Swing pricing refers to a process for adjusting a Scheme's Net Asset Value (NAV) to effectively pass on transaction costs stemming from net capital activity (i.e. flows into or out of a Scheme) to the investors associated with that activity. This would help to ensure fairness of treatment to all the investors i.e. whether entering, exiting or remaining invested in mutual fund schemes, particularly during market dislocation.

Accordingly, mandatory full swing during market dislocation times shall apply as under:

- Swing pricing framework will be applicable only for scenarios related to net outflows from the Scheme.

- Market dislocation will be determined by SEBI either based on AMFI's recommendation or suo moto. Once market dislocation is declared, it will be notified by SEBI that swing pricing will be applicable for a specified period.

- When swing pricing framework is triggered and swing factor is made applicable, both the incoming and outgoing investors shall get NAV adjusted for swing factor.

- Swing pricing shall be made applicable to all unitholders at PAN level with an exemption for redemptions upto Rs. 2 lacs for the Scheme

- Thereafter, mandatory swing pricing will apply for applicable open ended debt Schemes which:
  a. have 'High' or 'Very High' risk on the risk-o-meter (as of the most recent period at the time of declaration of market dislocation); AND
  b. classify themselves in the cells A-III, B-II, B-III, C-I, C-II and C-III of Potential Risk Class (PRC) Matrix

- Swing factor as per below matrix shall be made applicable to the above mentioned schemes and the NAV will be adjusted for the swing factor.

Swing Factor			
Max Credit Risk of scheme →	**Class A(CRV* >=12)**	**Class B (CRV* >=10)**	**Class C (CRV* <10)**
Max Interest Rate Risk of the Scheme ↓			
Class I: (MD<=1 year)	-	-	C-I : 1.5%
Class II: (MD<=3 years)	-	B-II : 1.25%	C-II : 1.75%
Class III: Any Macaulay duration	A III: 1%	B-III : 1.5%	C-III : 2%
* CRV - Credit Risk Value			

Impact on investors: When the Swing Framework is triggered and swing factor is made applicable, both the incoming (unit holders who submit purchase / switch-in requests) and outgoing investors (unit holders who submit redemption / switch out requests) shall get NAV adjusted downwards for swing factor.

Illustration:
For e.g. When swing pricing is triggered, the NAV will be adjusted downwards as follows

Risk-O-meter	PRC	Computed NAV (Rs. Per unit)	Swing Factor Applied	Swing NAV (Rs. Per unit)
High / Very High	**A-III**	20.0000	1.00%	19.8000
	B-II	20.0000	1.25%	19.7500
	B-III	20.0000	1.50%	19.7000
	C-I	20.0000	1.50%	19.7000
	C-II	20.0000	1.75%	19.6500
	C-III	20.0000	2.00%	19.6000

(xii) Details pertaining to PRC matrix

- Investors are requested to note that placement of the scheme in one of the cells of PRC matrix does not reflect the scheme holdings pertaining to the perpetual bonds (including debt instruments with special features viz. subordination to equity which absorbs losses before equity capital and /or convertible to equity upon trigger of a pre-specified event for loss absorption, for instance Additional Tier I bonds issued under Basel III framework) with respect to the MD and maturity thresholds specified in relevant SEBI circulars, till the time such bonds are held by the scheme(s), for pre-existing holding of perpetual bonds by aforementioned debt schemes, as applicable, as on the date of the circular.

- The PRC value of a scheme could change temporarily due to investment actions, price changes, rating changes etc. Any such temporary change in the PRC cell of a Scheme to a higher risk scale for either credit risk or duration risk beyond the maximum risk specified for the chosen PRC cell shall be treated as a passive breach and shall be rebalanced within a period specified in the Scheme Information Document.

- Investors should note that once a PRC cell selection is done by the Scheme, any permanent change in the positioning of the Scheme into a cell resulting in a risk (in terms of credit risk or duration risk) which is higher than the maximum risk specified for the chosen PRC cell, shall be considered as a fundamental attribute change of the Scheme in terms of regulation 18(15A) of SEBI (Mutual Fund) Regulations, 1996.

Accordingly, Mutual Funds shall be treated at par with a registered FII in respect of position limits in index futures, index options, stock options and stock futures contracts.

The Scheme may use derivatives instruments like Interest Rate Swaps, Forward Rate Agreements or such other derivative instruments as may be introduced from time to time for the purpose of hedging and portfolio balancing and as may be permitted under the Regulations and guidelines.

1. Interest Rate Swaps

Interest rate swap is a strategy in which one party exchanges a stream of interest for another party's stream. Interest rate swaps are normally 'fixed against floating' but can also be 'fixed against fixed' or 'floating against floating' rate swaps. Interest rate swaps will be used to take advantage of interest-rate fluctuations, by swapping fixed-rate obligations for floating rate obligations or swapping floating rate obligations to fixed-rate obligations. A floating-to-fixed swap increases the certainty of an issuer's future obligations. Swapping from fixed-to-floating rate may save the issuer money if interest rates decline. Swapping allows issuers to revise their debt profile to take advantage of current or expected future market conditions.

2. Forward Rate Agreement (FRA)

A FRA is basically a forward starting IRS. It is an agreement between two parties to pay or receive the difference between an agreed fixed rate (the FRA rate) and the interest rate (reference rate) prevailing on a stipulated future date, based on a notional principal amount for an agreed period. The only cash flow is the difference between the FRA rate and the reference rate. As is the case with IRS, the notional amounts are not exchanged in FRAs.

Advantages of Derivatives

The volatility in Indian debt markets has increased over last few months. Derivatives provide unique flexibility to the Scheme to hedge part of their portfolio. Some of the advantages of specific derivatives are as under:

Bond markets in India are not very liquid. Investors run the risk of illiquidity in such markets. Investing for short-term periods for liquidity purposes has its own risks. Investors can benefit if the Fund remains in call market for the liquidity and at the same time take advantage of fixed rates by entering into a swap. It adds certainty to the returns without sacrificing liquidity.

Illustration: Interest Rate Swap (IRS)

Assume that a Mutual Fund has INR 10 crore, which is to be deployed in overnight products for 7 days. This money will be exposed to interest rate risk on daily basis. The fund can buy an Interest Rate Swap receiving fixed interest rate and paying NSE MIBOR.

The deal will be as under:

Counterparty Bank   Mutual Fund

Receives   Floating rate (NSE MIBOR)   Pays

←--

Fixed rate (8.75%)

Pays ---> Receives

The cash flows on a notional principal amount of Rs. 10 crores would be-

(Rs. in Crore)

	Principal	NSE MIBOR	Interest	Amount	
Day 1		10.0000	8.10%	.0022192	10.00221918
Day 2		10.00222	8.20%	.0022466	10.00446575
Day 3		10.00447	8.30%	.002274	10.00673973
Day 4 (for 2 days)	Saturday	10.00674	8.15%	.0044658	10.01120548
Day 5	Sunday		Holiday		
Day 6		10.01121	8.40%	.0023014	10.01350685
Day 7		10.01351	8.50%	.0023288	10.01583562
Floating Interest Payable					.0158356164
Fixed Interest Receivable					.0167808219
Net Receivable for Mutual Fund receiving fixed					.0009452055

In this example, Mutual Fund stands to gain by receiving fixed rates. As the NSE MIBOR floating rate is decided daily, in adverse scenario, the Mutual Fund may have to pay the difference.

The counter-party providing Swap, Options, Forward Rate Agreements (FRAs) will do the same at a cost.

Risk factors Interest rate swaps strategy:

Risk Factor: The risk arising out of uses of the above derivative strategy as under:

- Lack of opportunities available in the market.
- The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- Interest rate swaps require the maintenance of adequate controls to monitor the transactions entered into, the ability to forecast failure of another party (usually referred to as the 'counter party') to comply with the terms of the derivatives contract.

Risk factors associated with imperfect hedge using Interest Rate Futures

1. The cost of hedge can be higher than adverse impact of market movements
2. Price / change in price of a security may or may not be the same in spot/cash and futures segment of the market. This may lead to the hedging position not giving the exact desired hedge result.
3. Derivatives will entail a counter-party risk to the extent of amount that can become due from the party.
4. Efficiency of a derivatives market depends on the development of a liquid and efficient market for underlying securities.

ILLUSTRATION FOR IMPERFECT HEDGE ON INTEREST RATE FUTURES

Security	Market Value (in Cr.)	Weight in the Portfolio	Yield (%)	Modified Duration	Weighted Modified Duration
GOI 7.35% 22.06.2024	50.00	10.64%	7.05	5.00	0.53
GOI 6.79% 15.05.2027	400.00	85.11%	7.03	6.85	5.83
GOI 6.68% 17/09/2031	20.00	4.26%	7.08	8.71	0.37
	470				
679GS2027 IRF	100.99				

Consider a hypothetical portfolio or a part of a larger portfolio composed of 3 different securities with a Portfolio Average Modified Duration of 6.74. On account of change in economic factors, it is expected that the interest rates could go up by 1% over the coming days. The portfolio would look to hedge the impact on this portfolio through selling IRF, of which the underlying security is different as given. This would be an example of imperfect hedge where the portfolio that is hedged and the instrument underlying the futures contract are different.

The maximum number of contracts in IRF to sold is given by the following formula = (Market Value portfolio * Modified Duration of portfolio)/ (Market Value of 1 Futures contract* Modified Duration of futures)

Market Value Portfolio * Modified Duration Portfolio	31,654,557,509.18
Market Value of 1 Futures Contract	201,985.00
No of contracts to be sold	23,183.04
Market Value of Futures (in Cr.)	468.26
Negative Impact on Portfolio (in Cr.)	-31.65
Positive Gain on Futures (in Cr.)	31.65

The impact on portfolio due to a 1% rise in yields is approx Rs. 31.65 crs. Since the portfolio has sold IRF contracts, the gain on account of the same is around Rs. 31.65 crs. Accordingly, the loss on the underlying portfolio is hedged through IRF even as the underlying securities are different. The scheme would pursue imperfect hedging to the extent permitted by extant SEBI guidelines

K. DEBT MARKET IN INDIA

The Indian debt markets are one of the largest and rapidly developing markets in Asia. Government and Public Sector enterprises are the predominant borrowers in the market. The debt markets have received lot of regulatory and governmental focus off late and are developing fast, with the rapid introduction of new instruments including derivatives. Foreign Portfolio Investors are also allowed to invest in Indian debt markets subject to ceiling levels announced by the government. There has been a considerable increase in the trading volumes in the market. The trading volumes are largely concentrated in the Government of India Securities, which contribute a significant proportion of the daily trades.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks), Treasury Bills (issued by RBI) and the Triparty Repo.

Government securities are largely traded on a Negotiated Order Matching system (NDS OM) apart from the OTC market. The settlement of trades both in the Gsec markets and the overnight repo and TREPS are guaranteed and done by a central counterparty, the Clearing corporation of India (CCIL). Money market deals involving CD's and CP's are traded and settled on an OTC basis. The clearing and settlement of corporate bond deals are now routed through a central counterparty established by the exchanges BSE (ICCL) and NSE (NSCCL) which settles deals on a DVP (Delivery versus payment) non guaranteed basis.

The current market yields of various instruments and the factors affecting prices of such securities are given hereunder. The securitized instruments of higher ratings generally offer yields which are 50-75 basis points higher than the comparable normal debt instruments.

Following are the yield matrix of various debt instruments as on September 30, 2023:

Instruments	Indicative yield range
Overnight rates	6.75 - 6.80
90 day Commercial Paper	7.00 - 7.05
91-day T-bill	6.80 – 6.85
1 year G-Sec	7.00 – 7.05
5 year G – Sec	7.20-7.25
10 year G-Sec	7.23 7.27
1 year AAA Bond	7.40 - 7.45
5 year AAA Bond	7.65 – 7.70

The interest rate market conditions are influenced by the Liquidity in the system, Credit growth, GDP growth, Inflows into the Country, Currency movement in the Forex market, demand and supply of issues and change in investors' preference. Generally, when there is a rise in interest rates the price of securities fall and vice versa. The extent of change in price shall depend on the rating, tenor to maturity, coupon and the extent of fall or rise in interest rates. The Government securities carry zero credit risk, but they carry interest rate risk like any other Fixed Income Securities. Money market instruments such as CP's and CD's which are fairly liquid are not listed in exchanges. The impact cost of offloading the various asset classes differ depending on market conditions and may impair the value of the securities to that extent. Further, investments in securitized instruments or structured obligation papers carry a higher illiquidity risk. They also carry limited recourse to the originator, delinquency risk out of the defaults on the receivables and prepayment risk which affects the yields on the instruments

In accordance with Regulation 25 (16A), the asset management company shall invest such amounts in such schemes of the mutual fund, based on the risks associated with the schemes, as may be specified by the Board from time to time. M. INVESTMENTS IN OTHER SCHEMES

N. PROCEDURES FOLLOWED FOR INVESTMENT DECISIONS

The process of approval of transactions is done by the investment team comprising of Chief Investment Officer (CIO), Vice President (Investment Risk & Process Control) and all Fund Managers. The committee also invites the Compliance Officer and Head of Research in its meetings. The investment committee holds periodic meetings for a detailed review of investment strategy, portfolio holdings, review of research and dealing activities, analysis of scheme performances and also to ensure adherence to all internal guidelines and processes. The Investment Committee monitors and supervises the investment decisions made by the Investment team and also monitors the risk parameters in each scheme to ensure that the investment limits are properly observed. The risk origination for the investments is done based on the guidelines issued by SEBI and Board of Trustees. Concurrent auditors periodically check the limits and their reports are placed before the Audit Committee, which is comprised of the independent Directors and Trustees. The monitoring of decisions is taken through quarterly secondary and primary market report to the Directors. All the deals, both primary and secondary market are reported periodically to the investment committee and the Board of Trustees.

P. PORTFOLIO TURNOVER

The Portfolio Turnover is defined as the lower of the value of purchases or sales as a percentage of the average corpus of the Scheme during a specified period of time. The Asset Management Company does not have a policy statement on portfolio turnover. Generally, the Asset Management Company's portfolio management style is conducive to a low portfolio turnover rate. However, given the nature of the Scheme which follows a monthly cycle or rollover / positions the portfolio turnover is expected to be high. Further, there are trading opportunities that present themselves from time to time. These trading opportunities may be due to changes in interest rate policy by the Reserve Bank of India, shifts in the yield curve, credit rating changes or any other factors where in the opinion of the fund manager there is an opportunity to enhance the total return of the portfolio. It will be the endeavour of the fund manager to keep portfolio turnover rates as low as possible.

R. DISCLOSURES PERTAINING TO SECURTIZED DEBT

Risk profile of securitized debt vis-a-vis risk appetite of the scheme

The risk of investing in securitized debt is similar to investing in debt securities. However, it differs from other debt securities in two ways:

- **Liquidity**: Typically, the liquidity of securitized debt is less than similar debt securities.
- **Pre-payment**: For certain types of securitized debt (backed by mortgages, personal loans, credit card debt, etc.), there is an additional pre-payment risk. Pre-payment risk refers to the possibility that loans are repaid before they are due, which may reduce returns if the re-investment rates are lower than initially envisaged.

Policy relating to originators:

A securitization transaction involves sale of receivables by the originator (a bank, non-banking finance company, housing finance company, or a manufacturing/service company) to a Special Purpose Vehicle (SPV), typically set up in the form of a trust. Investors are issued rated Pass Through Certificates (PTCs), the proceeds of which are paid as consideration to the originator. In this manner, the originator, by selling his loan receivables to an SPV, receives consideration from investors much before the maturity of the underlying loans. Investors are paid from the collections of the underlying loans from borrowers. Typically, the transaction is provided with a limited amount of credit enhancement (as stipulated by the rating agency for a target rating), which provides protection to investors against defaults by the underlying borrowers.

The scheme will invest in instruments of the originator only if the originator has an investment grade rating. Over and above the credit rating assigned by credit rating agencies to the originator, SBI MF will conduct an additional evaluation on

- Previous track record on origination, servicing and performance of existing pools
- Willingness to pay, through credit enhancement facilities etc.
- Ability to pay
- Business risk assessment, wherein following factors are considered:

    - Outlook for the economy (domestic and global)
    - Outlook for the industry
    - Originator/Pool specific factors

For single loan PTC, credit evaluation of the underlying corporate will be carried out as with any other debt instruments

Risk mitigation strategies:

Risk mitigation strategies will depend on each asset class, whether they are unsecured loans or secured, seasoning, collection history, past recovery rates, originator's financial profile, servicing performance, etc. for each asset class. SBI MF will invest in pools with investment grade rating by SEBI recognised rating agencies. In addition, some specific risk mitigation measures will include

Risk	Mitigants
Credit Risk	Analysis of originator with respect to past track record, systems and processes, performance of pools, collateral adequacy and disclosure frequency; Analysis of specific pool with respect to nature of underlying asset, seasoning, loan sizes, loan to vale ratio, geographical diversity, etc
Counterparty Risk	Past track record of handling securitized transactions, disclosure adequacy and frequency
Legal Risk	Check with rating agency that investors' interest is not compromised, specific protection measures like bankruptcy remoteness, etc are built in Separate in-house legal opinion on transactions,
Market Risk	Liquidity, Prepayment and Interest Rate Risk Analysis and level of their mitigation through transaction structure and credit enhancements provided

The level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments:

Framework that will be applied while evaluating investment decision relating to a pool securitization transaction:

Characteristics/Type of Pool	**Mortgage Loan**	**Commercial Vehicle and Construction Equipment**	**CAR**	**2 wheelers**	**Micro Finance Pools**	**Personal Loans**	**Single Sell Downs**	**Others**

Collateral margin (including cash, guarantees, excess interest spread, subordinate tranche)	5-20%	5-20%	5-20%	5-20%	10-30%	10-30%	NA	NA

Characteristics/Type of Pool	Mortgage Loan	Commercial Vehicle and Construction Equipment	CAR	2 wheelers	Micro Finance Pools	Personal Loans	Single Sell Downs	Others

Maximum single exposure range	3-4%	3-4%	Retail	Retail	Retail	Retail	NA	NA
Average single exposure range %	1-1.5%	1.5-2%	Retail	Retail	Retail	Retail	NA	NA

Information illustrated in the Table above, is based on the current scenario relating to Securitized Debt market and is subject to change depending upon the change in the related factors. The investment committee will review the above guidelines considering the extant RBI guidelines pertaining to securitization.

We endeavor to consider some of the important risk mitigating factors for securitized pool i.e.

- Average original maturity of the pool: based on different asset classes and current market practices
- Collateral margin including cash collateral and other credit enhancements
- Loan to Value Ratio
- Average seasoning of the pool, which is a key indicator of past pool performance
- Default rate distribution
- Geographical Distribution
- Maximum single exposure: Retail pools (passenger cars, 2-wheelers, Micro finance, personal loans, etc.) are generally well diversified with maximum and average single exposure limits within 1%.

As illustrated above, these factors vary for different asset classes and would be based on interactions with each originator as well as the credit rating agency

Minimum retention period of the debt by originator prior to securitization:

The AMC will invest in securitized debt as per final RBI guidelines issued on May 7, 2012 and as amended till date.

Minimum retention percentage by originator of debts to be securitized

The AMC will invest in securitized debt as per final RBI guidelines issued on May 7, 2012 and as amended till date.

The mechanism to tackle conflict of interest when the mutual fund invests in securitized debt of an originator and the originator in turn makes investments in that particular scheme of the fund

Investments made by the Scheme in any asset are done based on the requirements of the Scheme and is in accordance with the investment policy. All Investments are made entirely at an arm's length basis with no consideration of any existing / consequent investments by any party related to the transaction (originator, issuer, borrower etc.). Investments made in Securitized debt are made as per the Investment pattern of the Scheme and are done after detailed analysis of the underlying asset. There might be instances of Originator investing in the same scheme but both the transactions are at arm's length and avoid any conflict of interest.

The resources and mechanism of individual risk assessment with the AMC for monitoring investment in securitized debt

As with any other debt instruments, investment in securitized debt instruments will be closely monitored by a dedicated team of credit analysts, ratings of any such instruments will be continuously tracked and periodic performance report from Trustee and MIS from Originators, if any would be scrutinized closely.

S. STOCK LENDING

The scheme may also engage in stock lending. Stock lending means the lending of stock to another person or entity for a fixed period of time, at a negotiated compensation. The securities lent will be returned by the borrower on expiry of the stipulated period. The Fund may in future carry out stock-lending activity under the scheme, in order to augment its income. Stock lending may involve risk of default on part of the borrower. However, this risk will be substantially reduced as the Fund has opted for the "Principal Lender Scheme of Stock Lending", where entire risk of borrower's default rests with approved intermediary and not with the Fund. There may also be risks associated with Stock Lending such as liquidity and other market risks. Any stock lending done by the scheme shall be in accordance with any Regulations or guidelines regarding the same.

T. Investment in repo in Corporate Debt Securities

In accordance with the the applicable regulatory guidelines on repo transactions, the following broad guidelines as per the policy approved by Board of AMC and Trustee shall be followed by the Scheme:

1. The gross exposure of the scheme to repo transactions in corporate debt securities shall not be more than 10% of the net assets of the concerned scheme.
2. The cumulative gross exposure through equity, debt, derivative positions (including fixed income derivatives), repo transactions in corporate debt securities, other permitted securities/assets and such other securities/assets as may be permitted by SEBI from time to time should not exceed 100% of the net assets of the scheme
3. The Scheme shall participate in repo transactions only in Listed AA and above rated corporate debt securities, Commercial Papers (CPs) and Certificate of Deposits (CDs).

4. The Scheme shall borrow through repo transactions only if the tenor of the transaction does not exceed a period of 6 months in terms of Regulation 44 (2) of SEBI (Mutual Funds) Regulations, 1996.

   Further, the following conditions and norms shall apply to repo in corporate debt securities as approved by the Board of AMC & Trustee Company:

   1. **<u>Category of counterparty</u>** - The scheme of SBI Mutual Fund would transact in corporate bond repo only with counterparties in the approved list applicable for secondary market transactions in Corporate and Money market securities.
   2. **<u>Credit Rating of the counterparty</u>** - The scheme shall participate in corporate bond repo transactions with only those counterparties who have a credit rating of AA- and above and are part of the approved counterparty universe. Corporate bond repo transactions with counterparties rated below AA- would be with prior approval of the Board.
   3. **<u>Tenor of collateral -</u>** The tenor of the repo would be capped at 3 months. This would apply to transactions where the schemes are either a lender or a borrower. The tenor of the collateral would be capped at 10 years. Prior approval of the investment committee of SBI Mutual Fund would be taken for any extension of the term of the repo or increase in the tenor of the collateral in compliance with the applicable SEBI guidelines.
   4. **<u>Applicable haircuts</u>** - The applicable minimum haircut would be as per the extant RBI and SEBI guidelines. As per RBI circular RBI/2012-13/365 IDMD.PCD. 09/14.03.02/2012-13 dated 07/01/2013, all corporate bond repo transactions will be subject to a minimum haircut given as below. The minimum haircut will be applicable on the market value of the corporate debt securities prevailing on the day of trade of the 1st leg. The scheme may ask for a higher haircut (while lending) or give a higher haircut (while borrowing) depending on the prevailing market situation.

Rating	AAA	AA+	AA
Minimum Haircut	7.50%	8.50%	10%

U. <u>CONCEPT OF MACAULAY DURATION</u>

The Macaulay duration measures the weighted average term to maturity of the bond’s cash flow. The weights in this weighted average are the present value of each cash flow as a percent of the present value of all the bond’s cash flows.

Macaulay’s Duration is linked to the price volatility of a bond.

Duration is the fund manager's tool for structuring a portfolio of bonds to have the desired sensitivity.

Illustration :

Macaulay Duration is a measure of the average life of a security. More specifically, it is the weighted average term-to-maturity of the security's cash flows. Mathematically, it is:

$$\text{Duration} = \frac{t_1 \times PVCF_1 + t_2 \times PVCF_2 + t_3 \times PVCF_3 + \dots + t_n \times PVCF_t}{k \times PVTCF}$$

where

$PVCF_t$ = the present value of the cash flow in period t discounted at the yield-to-maturity.

PVTCF = the total present value of the cash flow of the security determined by the yield-to-maturity, or simply the price of the security.

K = number of payments per year.

The following is an example of duration

Coupon rate:	8%		
Term:	5 Years		
Yield to Maturity	8%		
Price	100		
Period	**Cash Flow**	**PVCF**	**t x PVCFt**
1	4.00	3.85	3.85
2	4.00	3.70	7.40
3	4.00	3.56	10.67
4	4.00	3.42	13.68
5	4.00	3.29	16.44
6	4.00	3.16	18.97
7	4.00	3.04	21.28
8	4.00	2.92	23.38
9	4.00	2.81	25.29
10	104.00	70.26	702.59
Total		**100.00**	**843.53**

The Macaulay Duration of the portfolio is 843.5331/ (2*100) = 4.2177

- **Swing STP**

Swing STP is a facility wherein investor can opt to transfer an amount at regular intervals from source scheme of SBI Mutual Fund (SBIMF) to a target scheme of SBIMF including a feature of reverse transfer from target scheme into the source scheme, in order to achieve the targeted market value on each transfer date in the target scheme. This ensures that the market value on each date of the transfer rises by a specified amount at every frequency irrespective of the market price. For example if investor decides that the value of their investment in the target scheme should appreciate by Rs. 1000 per month, then each month investor will invest only to the extent of the shortfall. If appreciation in the target scheme is higher than the target value then this excess value is reverse transferred to the source scheme. Thus the amount to be transferred will be arrived at on the basis of the difference between the target market value and the actual market value of the holdings in the target scheme on the date of transfer.

Terms & conditions of Swing STP are as follows:

- Source scheme: All open ended schemes (Excluding SBI Long Term Equity Fund and ETF schemes) of SBI Mutual Fund.
- Target scheme: Growth option in all open ended schemes (Excluding SBI Long Term Equity Fund and ETF schemes) of SBI Mutual Fund.
- Frequency: Weekly, Monthly and Quarterly intervals. In case the Frequency is not indicated, Monthly frequency shall be treated as the Default Frequency.
- Dates: The dates of transfers/ default dates shall be as under:

Monthly Interval	1^{st}, 5^{th}, 10^{th}, 15^{th}, 20^{th}, 25^{th} & 30^{th} In case of February last working day)	10th of every month

Quarterly Interval	1st, 5th, 10th, 15th, 20th, 25th & 30th (In case of February last working day) The beginning of the quarter could be any month e.g. January, May, November, etc.	10th of every quarter

In case the date of transfer falls on a non-Business Day, the immediate next Business day will be considered for the purpose of determining the applicability of NAV and processing the transaction.

  - Quarterly frequency: Rs. 3,000 and in multiples of Re. 1

(First installment amount X Number of installments including the current installment) – Market Value of the investments through Swing STP in the target scheme/plan/option on the date of transfer.

In case on the STP date, the amount (as specified above) to be transferred is not available in the source scheme/plan/option in the investor's folio, the residual amount will be transferred to the target scheme/plan/option and Swing STP will be closed. Investors have an option to consider earlier investments in the target scheme for calculating Swing STP amount.

- Reverse Transfer: On the date of transfer, if the market value of the investments in the target scheme/plan/option through Swing STP is higher than the target market value (first installment amount X number of installments including the current installment), then a reverse transfer will be effected from the target scheme/plan/option to the source scheme/plan/option to the extent of the difference in the amount, in order to arrive at the target market value.
- **Top-up option**: Investor can choose Swing STP based on fixed amount installment and additionally investor has an option to choose top-up option. Under this, investor can indicate an absolute amount or percentage (in annualized terms) by which each installment amount will be increased. Amount of transfer will be calculated by taking into consideration of the target market value (including top-up amount) and actual market value of the investments in the target scheme.
  - Amount of transfer: The first Swing STP installment will be processed for the first installment amount specified by the investor at the time of enrollment. From the second Swing STP installment onwards, the transfer amount will be derived by the following formula:

In case Top-up amount mentioned as absolute amount:

Target market value Minus Market Value of the investments through Swing STP in the target scheme/plan/option on the date of transfer.

D.NAV INFORMATION

The first NAV will be calculated and announced not later than 5 business days from the date of allotment in the NFO. Thereafter NAV of the Scheme shall be computed and declared on every business day. The NAV under the Scheme would be rounded off to 4 decimals and Units will be allotted upto four decimal places as follows or such other formula as may be prescribed by SEBI from time to time:

$$NAV = \frac{\text{Market or Fair Value of Scheme's investments + Current Assets - Current Liabilities and Provision}}{\text{No of Units outstanding under Scheme on the Valuation Date}}$$

NAV will be disclosed in the manner as specified prescribed under SEBI (Mutual Funds) Regulations, 1996. NAV can also be viewed on www.sbimf.com and www.amfiindia.com.

The AMC shall update the NAVs on the website of Association of Mutual Funds in India - AMFI (www.amfiindia.com) by 11.00 p.m. In case of any delay, the reasons for such delay would be explained to AMFI and SEBI by the next day.

Whenever the Scheme invests in foreign securities, the NAVs of Scheme shall be updated on daily basis on the website of the AMC and on the website of AMFI by 10:00 a.m. of the following business day in line with Paragraph 8.2 of SEBI Master Circular for mutual funds dated May 19, 2023.

In case of non-availability of price/valuation for the underlying overseas investments before aforementioned timeline, consequent to which there would be inability in capturing same day price/valuation for such underlying investments, then NAV of the Scheme will be declared as and when the price/valuation for such underlying securities/ Funds is available.

If the NAVs are not available before commencement of business hours on the following day due to any reason, the Fund shall issue a press release providing reasons and explaining when the Fund would be able to publish the NAVs.

In case NAV of Corporate Debt Market Development Fund ('CDMDF') units is not available by 9:30 p.m. of same Business Day, NAV declaration timing for Mutual Fund Schemes holding units of CDMDF shall be 10 a.m. on next business day instead of 11 p.m. on same Business Day.

Further, as per SEBI Regulations, the repurchase price shall not be lower than 95% of the NAV.

Methodology for calculation of sale and re-purchase price of the units of mutual fund scheme:

Let's assume that the NAV of a Mutual Fund Scheme on April 01, 2018 is Rs. 10/-.

Purchase of mutual fund units:

The Purchase Price of the Units on an ongoing basis will be same as Applicable NAV.

Purchase Price = Applicable NAV

In the above example, purchase is done on April 01, 2018, when the Applicable NAV = Rs. 10/-
Therefore, Purchase Price = Rs. 10/-

As per existing Regulations, no entry load is charged with respect to applications for purchase / additional purchase of mutual funds units.

Redemption/Re-purchase of mutual fund units

The Redemption Price of the Units will be calculated on the basis of the Applicable NAV subject to prevailing Exit Load, if any. In case of redemption, the amount payable to the investor shall be calculated as follows:

Redemption Price = Applicable NAV * (1 - Exit Load)

Say, in the above example the exit load applicable is:

a. For exit on or before 12 months from the date of allotment – 1.00%

b. For exit after 12 months from the date of allotment – Nil.

Scenario 1: Redemption is done during applicability of exit load

In case the investor requests for redemption on or before 12 months i.e. on or before March 31, 2019; say December 1, 2018, when the NAV of the scheme is Rs. 12/- and the exit load applicable is 1%, so the Redemption amount payable to investor shall be calculated as follows:

Redemption Price = Applicable NAV * (1 - Exit Load)
= Rs. 12 * (1-1%) = Rs. 11.988/-

Scenario 2: Redemption is done when the exit load is NIL

In case the investor requests for redemption after 12 months i.e. after March 31, 2019; say April 1, 2019, when the NAV of the scheme is Rs. 12/- and the exit load applicable is NIL, so the Redemption amount payable to investor shall be calculated as follows:

Redemption Price = Applicable NAV * (1 - Exit Load)
= Rs. 12 * (1-0) = Rs. 12/-

The aforesaid example does not take into consideration any applicable statutory levies or taxes. Accordingly, the redemption amount payable to investor shall further reduce to the extent of applicable statutory levies or taxes.

Note: The aforesaid disclosure has been made pursuant to paragraph 8.1.5 of the SEBI Master Circular for mutual funds dated May 19, 2023.

(i) in lieu of or to substitute budgetary resources envisaged for the projects;
(ii) without undertaking due diligence on the viability and bankability of the projects to ensure that revenue streams from the projects are sufficient to take care of the debt servicing obligations: and

(iii) the repayment servicing of which was done out of budgetary resources.

RBI in its order informed that Bank contravened the directions contained in paragraphs 2.3.7.3 (iii) and 2.3.7.5 (i) of Reserve Bank Master Circular No. DBR.No.DirBC.10/13.03.00/2015-16 dated July 1, 2015, on “Loans and Advances – Statutory and Other Restrictions”, which warrants imposition of monetary penalty.

t. The bank failed to comply with the Reserve bank directions on “kisan credit card (KCC) Scheme”, when despite being pointed out in RAR 2020 it levied interest at rates higher than the prescribed rate for loans up to Rs. 3 lakh in KCC accounts.

In this regard, Bank has submitted response to RBI on 27.04.2023 stating that Rate of interest in KCC is linked to Subvention Cycle, which is the period from the date of sanction/renewal date till due date or for one year whichever is earlier. For loans upto Rs 3.00 lakh, rate of interest is fixed at 7% during Subvention Cycle. For loan above Rs 3.00 lakh, rate of interest during Subvention Cycle is applied at tiered structure i.e. upto Rs 3.00 lakh at 7% p.a. and beyond Rs 3.00 lakh as per Product default rate. Beyond Subvention Cycle, the rate of interest is applied at Product default rate.

In order to ensure effective implementation of regulatory guidelines, apart from IT controls, the interest subvention claim data is duly certified / audited by the Statutory Auditors. In addition to this, a Compensatory Control Mechanism (CCM) has also been implemented, wherein, the data of interest rate in KCC (Crop Loan) and any kind of aberrations / inconsistency are being examined and addressed through data fix by giving value dating benefit to the farmers. This ensures that farmers get correct subvention benefits.
